

Five-minute presentation plan

Editable outline / not a slide-count requirement

Name: [your name]

Topic: [letter]

One sentence the audience should remember: [your conclusion]

0:00–0:40 / Question

What did you ask, and why should the audience care?

0:40–1:30 / Model and decisive idea

What must be defined for the result to make sense? Which assumption or mechanical structure does the work?

1:30–3:20 / Central result

Which one or two equations or figures carry the argument? What do you need to explain rather than merely display?

3:20–4:30 / Validation

What is the independent check? What would failure of that check have meant?

4:30–5:00 / Conclusion and limitation

Answer the question. State the most important qualification.

Prepare for the two-minute discussion: [one likely question about assumptions; one about validation; one about your contribution].

Rehearsal check: [time measured aloud; readability checked; static backup prepared].

Presentations are December 9. Materials are due December 8 by 11:59 PM, New York time. Five minutes speaking and two minutes of questions; remaining class time is for review. December 14 is reserved entirely for Exam III.
